	nominal voltage current consumption control signals protection energized duty rating connection	electrical specifications           UB         DC 24 V (max. residual ripple 10 %           DC         < 0,7 A	nditions accordingly)
	actuation pressure range compressed air control actuator ports	Display         See actuation pressure-diagram           Display         Display           by 3/2 way proportional value         1           G 1/8         G 1/8	options sed air quality 5/4/3
The valves' technical design is based on media and application requirements. This can lead to deviations from the general specifications shown on the data sheet with regards to the design, sealing materials and characteristics. If order or application specifications are incomplete or imprecise there exists a risk of an incorrect technical design of the valve for the required application. As a consequence, the physical and / or chemical properties of the materials or seals used, may not be sui- table for the intended application.		connection plan	connection conditions When supplying the electrical set point signal to the proportional valve, the ac- tuating air must already be present. (see actuation pressure-diagram). position of installation arbitrarly, but regulator not downwards.

specifications not highlighted are standard specifications highlighted in grey are optional

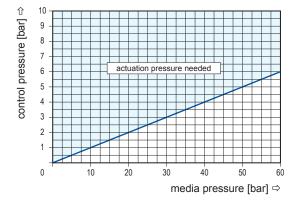

U<sub>B</sub> 0V U<sub>E</sub> 0V +24V

## type SPB 65

position of installation: as shown

## actuation pressure-diagram

## pressureless circulation mode
