Single Loop Controller Model C35/36

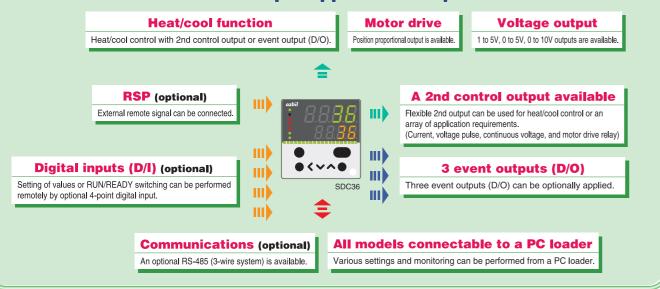

Integration of a new algorithm, high accuracy (±0.1%FS) and high speed sampling cycle 0.1 seconds. Advanced functions improve stability and disturbance response.

The wide variety of inputs and outputs of the model C35/36 can be used to fulfill multiple application requirements.

Simple design and compact Simple design not available in ==== conventional models. === The shortest depth in the world - 65mm. Ultra thin bezel of 5mm 5mm→ -65mm→ fits in the tightest mounting areas. **Rubber key** Finger-friendly buttons and operational keys improve operability and adds a unique look and design. Contr

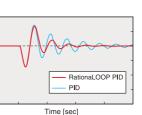

Greatly improved controllability ensured with a brand new algorithm

Stable control that is unaffected by disturbance has been realized by including the highly accurate "RationaLOOP PID" control logic and the "Just-FiTTER" algorithm (effective in suppressing overshoot).

RationaLOOP PID

Hunting is suppressed almost immediately with the addition of RationaLOOP PID to the conventional PID.

Difference between RationaLOOP PID and PID

Just-FITTER coefficient: Small

Just-FiTTER

Just-FiTTER is an algorithm that restricts overshoot within the disturbance response and step response functions.

Just-FiTTER at work

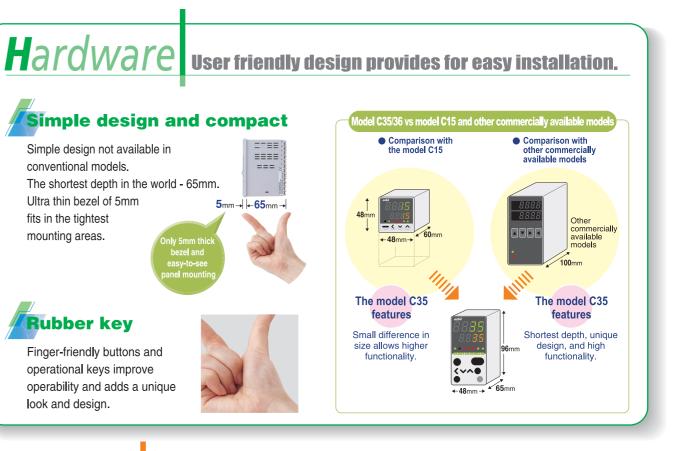

Time [sec]

Three separate Auto-Tuning features

The model C35/36 includes the following three types of Auto-Tuning as standard functions:

- Normal AT (Auto Tuning)
- Immediate response type Auto-Tune is suitable for heated systems with fast responding heater designs.

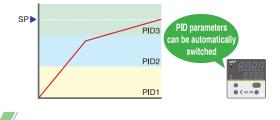

• Stable type Auto-Tuning which is suitable for systems involving a slow response heater design. Better control characteristics can be obtained depending on the variables of the application.

Optimum control with new algorithms and advanced Auto-Tune technology.

The model C35/36 has the ability to switch PID parameters depending on the process input value or the set-point value utilizing "zoned" temperature ranges. Both the process value and the set-point can be used to initiate change of the PID parameters to provide more detailed and optimum control of the application.

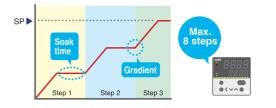

Programmable recipe control

Maximum of 8 set points (SP) can be set in the

model C35/36. Each SP has soak time and gradient settings, enabling a maximum of 8 steps (16 segments) of programmable recipe control.

Operation & Monitoring Easy-to-see display and operability assured simultaneously.

Large and easy-to-use dual seven-segment displays

Reliable visibility assured even from a distance. Process value (PV), set-point (SP) or other values are clearly indicated on two displays.

Mode key for easy change of operation modes

The following operation modes can easily be switched by pressing the mode key:

uspays.

Customizable parameter key

The model C35/36 offers user customization of the "para"

This key is used to access and monitor frequently used

key. A maximum of 8 parameters can be assigned.

parameters without navigating the menus.

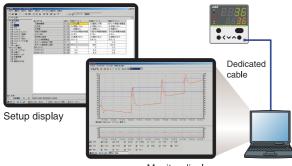

Software Creating new methods of installation and operation utilizing a wide variety of software functions.

PC loader (connection to PC via dedicated cable) used to set parameters and monitor values

The model C35/36 can be conveniently connected to a PC via our loader software. Easy connection is

provided via a dedicated connector cable. The software contains various functions such as parameter settings, trend monitoring and CSV output of acquisition data.

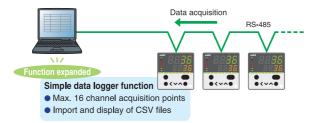

Monitor display

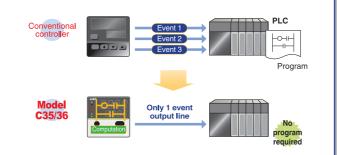

Event configuration functionality enables wiring reduction yielding labor cost savings

In the model C35/36, a maximum of 8 internal event points are provided. These internal events can be assigned to 3 event outputs using logic operations. The event output reduction in wiring yields labor cost savings and flexibility when expanding instrumentation.

Simple to use data logging function

Data logging with the PC loader from one or several model C35/36 can be accomplished via communications. DI/DO status can be logged simultaneously.

Specifications
